SKILLS

JavaScript, TypeScript, HTML, CSS, Tailwind CSS, SASS, React, Next.js, Node.js, Express.js, MongoDB, MySQL, PostgreSQL, Jest, Prisma, tRPC, Redux, Python, Git/Github, Vercel, Webpack, Jenkins, Electron, OAuth, Kanban, Scrum, AWS, Jira, Bitbucket

PROFESSIONAL EXPERIENCE

Software Engineer | Extensis

June 2023 – Current

- Spearheaded development of an automated font license risk assessment tool, building key features including a customizable React table with drag-and-drop column reordering, visibility toggles, and data export to CSV and PDF formats; contributed to a 175% increase in average sale price (ASP) of the Extensis Connect product.
- Overhauled the UI of the Extensis Connect web application by building a custom component library using Radix UI primitives, replacing deprecated BaseUI components and significantly improving accessibility and maintainability.
- Redesigned the font tagging system to support shared organizational tags, implementing changes across the stack and allowing users with different roles and permissions to manage tags appropriately, enabling collaborative workflows and improving consistency in asset management.
- Implemented core features and application scaffolding for Extensis's new flagship Electron app and delivered top user-requested enhancements such as keyboard shortcuts and dark mode support, resulting in greatly improved customer feedback

FREELANCE WORK & PROJECTS

CarboCat.io

- Developed a full-stack chemistry learning platform from scratch using Next.js, tRPC, Tailwind CSS, and PostgreSQL
- Created over 10 unique problem types, including the industry's first reaction mechanism tool, enabling students to intuitively connect nodes via a drag-and-drop interface for interactive learning using React Flow.
- Integrated custom chemical editor with cheminformatics libraries to provide students with instant and high-quality feedback, which accounts for multiple correct answers depending on the 3D orientation of molecules.

AthenaJS

- Built a standalone application with Node.js runtime (using Electron) to enable cross-platform compatibility and leverage file and operating system APIs to persist data between sessions and allow users to upload files
- Used React Profiler API and ChartJS to measure and display component render times upon mounting, enabling users to easily identify bottlenecks in their application's performance by comparison using bar graphs
- Designed algorithm to parse user-uploaded JSX files into an abstract syntax tree (AST) and traverse the AST to automatically extract and inject component code into the application's chemical editors

Mun Li Photography

- Built a fast, mobile-responsive website for a photography business to showcase high-fidelity images, enhancing visual presentation, improving SEO, and boosting customer engagement.
- Managed deployment via Vercel with GitHub integration, providing continuous updates based on client needs and analytics

Universal Engineering Compliance Dashboard

- Developed an application that enables companies to log chemical usage and assesses compliance with regulatory standards
- Built dynamic charts and dashboards to visualize chemical usage trends, enabling rapid identification of non-compliant metrics and simplifying regulatory oversight

EDUCATION

M.S California Institute of Technology GPA: 3.7/4.0

- Awarded an NSF Graduate Research Fellowship, providing \$138,000 in funding for outstanding STEM students.

B.S Chapman University GPA: 4.0/4.0

- Awarded the Ronald M. Huntington Award for the most distinguished academic record across all majors and colleges
